

Oesophageal Laboratory Cobham Clinic L&D

pH, Impedance and HRM

I set up the Oesophageal Laboratory at the L&D Hospital back in 2009. At the time we were just one of 12 district general hospitals in UK to be using this cutting edge technology. I have been a member of the UK HRM Users Group for several years.

24 hour pH studies - allow us to assess your acid reflux activity over a normal 24hour period.

Impedance assessments - allow us to differentiate how much of your regurgitation is related to acid or non-acid reflux.

High Resolution Manometry - allows us to visibly see how you gullet functions during the swallowing process.
