

# Small Bowel Capsule Endoscopy

I started reading capsule endoscopy over 15 years ago, when I was back at St. Thomas's Hospital, so have always been at the forefront in using this cutting edge technology.. I helped establish the new capsule services at Dartford Hospital (in 2005) and at the L&D (in 2011).

Over the years I have have seen marked developments in this field, with the introduction of oesophageal and colon capsules. Hopefully soon we will be introducing the new pan-enteric ("Crohn's") capsule. This has the battery power to record images from mouth-to-anus, providing a total endoscopy.

I am a member of the UK SBCE Users Group. I am active in research within this field. I aim to expand access to such services Nationally by influencing the BSG guidelines.
